

Required

- 1.) Add is_auto_poll to companies
- 2.) Add last_poll_tstamp to companies

Impactful Stories made possible by data model changes

- 1.) Can charge by active kpis for company, all kpis visible with “talk to” click throughs to promote upsell
- 2.) Can charge by users assigned to teams
- 3.) Can charge by number of teams
- 4.) Can charge by number of integration_users actively polling

Infrastructure Stories

- 1.) Allow more than one team for a given category (allows more than one sales team to compete)
- 2.) When Category assignment, populate team_kpis, is_active=false
- 3.) When add kpi for a Category, Add to all teams with that category, is_active=false
- 4.) Active kpis for team will be calculated
- 5.) Inactive kpis for team will not be calculated (should we have a last_calc_tstamp?)
- 6.) Kpis are activated for whole team only
- 7.) Poll by hierarchy, company:is_auto_poll -> team:is_auto_poll -> user:is_auto_poll -> integration_user:is_auto_poll (queue at each level. Add company to queue, process which adds each team to queue, process which adds each user to queue, etc)
- 8.) Calculate kpis by hierarchy, team:is_active -> team_user:is_active -> team_kpis:is_active
- 9.) A company must have at least one team
- 10.) Allows for user to be collecting data without being factored into calculation.

Admin Stories

- 1.) Turn off polling for company
- 2.) Turn off polling for team
- 3.) Turn off polling for user
- 4.) Set last_poll_tstamp for company
- 5.) Set last_poll_tstamp for team
- 6.) Set last_poll_tstamp for user
- 7.) Define Settings as application values to assist with requirements flexibility
- 8.) Reset data for company (will remove data for all teams, all users, all kpis)
- 9.) Reset data for team (will remove data only for team kpis for team users)
- 10.) Reset data for team_user (will remove data only for team kpis)
- 11.) Poll for single company – add PollCompany to RabbitMQ (restrict:last_poll_tstamp)
- 12.) Poll for single team – add PollTeam to RabbitMQ (restrict:last_poll_tstamp)
- 13.) Poll for single user – add PollUser to RabbitMQ (restrict:last_poll_tstamp)
- 14.) Calculate for single company – add CalcCompany to RabbitMQ (restrict:last_calc_tstamp?)
- 15.) Calculate for a single team – add CalcTeam to RabbitMQ (restrict:last_calc_tstamp?)

Account Owner Stories

- 1.) When sign up, Welcome page: “we are going to get a list of (count) users, this could take some time, let’s start by building your first team”. Assign category, Enter name.
- 2.) is_team_leader = true, for all teams by requirement
- 3.) Create a new team
- 4.) When create new team, validate available company team count or “Purchase more teams”?
- 5.) When create new team, select category
- 6.) Assign team users
- 7.) Enable / Disable user as team leader
- 8.) Activate/deactivate team kpis
- 9.) When activate kpi, validate available company kpi count or “Purchase more kpis”?
- 10.) See aggregate for all teams
- 11.) See all teams for category if more than one
- 12.) See aggregates for each team
- 13.) See “Add” for categories -> create team for category
- 14.) Inactive kpis will show grey and have “Enable” link (if exceed account allotment, add through purchase)
- 15.) Should we allow enable / disable auto_poll at various levels? If turning on polling for an integration user, alert if not an auto_polled user in a team or not a member of team that is auto_polling
- 16.) Limit: only Account Owner will have abilities that may incur company expense

Team Leader Stories

- 1.) See categories as leader
- 2.) See all teams in category as leader if leader in more than one
- 3.) See aggregates for teams as leader
- 4.) See members of team
- 5.) When category click: see team aggregate for
- 6.) Inactive kpis will show grey, click to “talk to account owner about activating”

User Stories

- 1.) See category is member
- 2.) See inactive kpis
- 3.) When category click, see user score aggregate for category
- 4.) When active kpi click, see user kpi score
- 5.) When inactive kpi click, see “talk to account owner [show owner] about activating”

Settings

- 1.) initialTeamCount=10 (Welcome screen allotment for adding users to team)
- 2.) initialActiveKpiCount=5

Concerns

- 1.) Having a team have an integration for all users and another integration only for some. If the same opportunity or close is in both, counted twice? Is the aggregate an apples to apples compare for all user in that team?
